

PeerSouth

SEMI DRYING VAN

PeerSouth is pleased to introduce its version of the "converted van". We continue to have a mutual concern for "safety" and "consistency". We realize that vans are used mainly because the capacity is greater than that of our specially designed "drying bodies". Knowing this, we do everything possible to ensure that this van will help you get the job done in the safest and most efficient manner.

We start with a "previously owned" van and convert it into a usable drying trailer. These vans are carefully inspected and must pass certain performance requirements. We go the extra mile by adding sufficient flashing and foaming to close up all the holes. We feel that 5 trusses add to the stability and aid in carrying the load. In an effort to aid in the longevity of the product, we paint all added steel, including the plenum area. Specific methods we use to install the perforated floor insure that it will last. Other standard features are the specially engineered wider pads (sand feet) we attach to the landing gear which add greater stability while in the field and easy access to the glad hands from inside the van for maintenance purposes.

Yes, there are others out there, but none that combine the consistency and efficiency of ours.

Current options include:

- New Tires and Rims
- Retread Tires and Rims
- Clean Out Gate
- Tarp
